

TOUGH SHOTS. ROUGH PLACES.

## Grand Slam® Riflescope with MultiStop Turret

Weaver's new and improved Grand Slam® series has taken the shooting world by storm. From advancements to the legendary Micro-Trac® erector system to a new cutting-edge exterior design—the revitalized Grand Slam series has revolutionized the optics market. For 2016, Weaver is doing it again with the addition of the MultiStop Turret system that lets the user build a custom ballistic turret and then reconfigure it for different loads and firearms. The MultiStop system is designed to provide shooters quick reference turret stops to ensure accuracy and eliminate hold-over. Color-coded bands on the turret can be adjusted to perfectly match any load. Simply turn the turret to the colored band that corresponds to the correct distance, hold dead-on and watch the target tumble. The scope even features a custom lens cap that provides a heads-up range/color reference card for fast turret stop selection. Users can visit [Weaveroptics.com/BallisticCalculator](http://Weaveroptics.com/BallisticCalculator) to set up their scope and print off a custom dope sheet. Place the sheet in the custom lens cap to have all of your distances at a glance.

### FEATURES

- » MultiStop turret provides customizable ballistics for a fast, precise hold on distant targets
- » Precision ground, fully multi-coated lenses provide clear edge-to-edge viewing
- » Argon-purged tubes eliminate internal fogging
- » Rugged one-piece, 1-inch tube construction
- » Side-focus parallax adjustment for long range precision
- » Cross-balanced spring system for repeatable high-precision adjustment of windage/elevation
- » Improved erector spring design maximizes force and uniformity throughout travel
- » Custom aluminum lens cap with heads-up reference card for bullet drop and windage corrections
