

Bushnell®

BTR-3 Reticle

AR OPTICS ACCELERATE™ 4X PRISM RIFLE SCOPE

MARKET RELEASE DATE:

June 2017

Long-range shooters sometimes pine for more compact optics. Red dot shooters want more range. The gray area between the two optics isn't so gray anymore: the Bushnell® AR Optics Accelerate™ 4X Prism Rifle Scope fills the gap. It has the compact stature of a red dot, with 4x magnification of a rifle scope. The new, illuminated BTR-3 reticle has five brightness settings in both red and green. The center circle and red dot work for quick acquisition, with drop points for long-range shots. The mil-based design works with any caliber firearm.

FEATURES & BENEFITS

- » Illuminated BTR-3 reticle has five red and five green brightness settings; also works as non-illuminated reticle
- » Compatible with any ammo, any caliber, any AR
- » Waterproof, fogproof, shockproof optic handles wear-and-tear in any environment
- » Hi-rise mount included for quick mounting on picatinny rails
- » Extended battery life
