

"I DIDN'T COME THIS FAR TO MISS!"® | 2023

LIKE SO MANY OF THE BEST STORIES, HEVI-Shot's started with a challenge. Some might have called it a problem, but not the engineers between our walls in Sweet Home, Oregon. When an alternative to lead was necessary, and subsequent steel loads fell short on performance, they were the ones who had the vision, knowledge and drive to see something more and turn it into reality. Through their hard work, they not only created products that were better than steel—they gave birth to pellets and shotshells that were more effective than lead. In the many years that have followed, that spark of innovation has led to even more advancements in non-lead pellet technology here at HEVI-Shot®, and I'm proud to say that momentum runs strong today. Our exclusive technologies take many forms in shotshells for everything from waterfowl and upland birds to turkeys and predators, but they all share a common result: more effective shot on target with greater range and results. Change in our industry and broader world is a constant, but the HEVI-Shot you've come to rely upon to be a more effective hunter is here for you—and always will be. What's more, our new partnerships and resources have positioned us for even more advancement in the future, and you'll see that reflected in the new products in this year's catalog. I want to personally thank you for insisting on better performance, for your dedication to hunting, and most of all, for shooting HEVI-Shot.

HEVI-SHOT PRODUCTS ARE NONTOXIC

I'm very conscious of my pattern density and that is why I shoot HEVI-XII™. It allows you to shoot shot three times smaller than you would with steel while still having more knock down power. Smaller shot means a lot more pellets on target and a pattern they can't fly through. Outside of TSS, HEVI-XII is the most lethal waterfowl load on the market, hands down!

TONY VANDEMORE

WATERFOWL

SNOW REMOVAL
IN PROGRESS.**

HEVI-XII

HEVI-XII. The original 12 density tungsten pellet that HEVI-Shot pioneered over 20 years ago. With the increased density, you can drop down three shot sizes of steel for the same lethality. By dropping down three shot sizes, you have over 28% more deadly pellets in the air. The result? More kills, fewer cripples, better stories. Pack HEVI-XII in and walk out carrying extra weight. In 2023 we are expanding our current line up to offer heavier payloads in 12 and 20 gauge.

HEVI-BISMUTH™

HEVI-Bismuth™. 22% more dense than steel, delivering 44% more downrange energy. Bismuth is more malleable than other nontoxic offerings, so it's safe to use in a new shotgun and that classic your grandfather taught you to shoot with. Hunters can drop down one shot size for the same performance they had from steel. For 2023 we are excited to announce the addition of 28 gauge 3" to the HEVI-Bismuth line up.

HEVI-METAL XTREME™

NEW

NEW for 2023! HEVI-Shot® is very excited to announce the next evolution of our HEVI-Metal® line up: HEVI-Metal Xtreme™! Using our Pattern Density Technology™, we layered 30% original HEVI-Shot 12 G/CC tungsten over 70% precision steel pellets. That leading layer of 12 density tungsten hits 53% harder than the steel layer! We didn't stop there. HEVI-Metal Xtreme uses the FLITECONTROL FLEX® WAD! This rear braking wad is designed to improve pattern density, consistency, and can be used with any steel rated choke (ported or non-ported alike). You owe it to yourself to give it a shot.

The biggest mistake I see as a turkey hunter is a lack of patience. If that tom shuts down mid-morning and you feel like leaving for the day, give it another hour. More times than not, by the time you reach the truck you'll hear him gobble right where you were just sitting. There's no worse feeling! Stick it out and shoot Magnum Blend!

TURKEY

**DOUBLE
DOWN ON
PERFORMANCE.**

WILD TURKEY CORDON BLEU

This recipe is a take on the age-old classic stuffed with prosciutto and cheese. My mom used to make this dish and I loved it. I decided to add a rich Dijon cream sauce you'll adore!

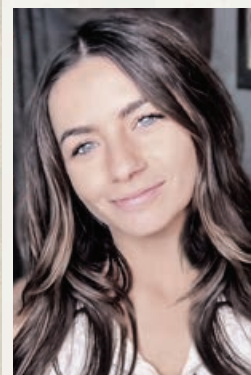

INGREDIENTS

- | | |
|--------------------------------|---------------------------------|
| 1 wild turkey breast | 1 teaspoon garlic powder |
| 6 pieces prosciutto | 1/2 cup flour |
| 4 slices Swiss cheese | 1-2 eggs, beaten |
| 8 ounces brie, cut into slices | 1 cup Italian panko breadcrumbs |
| 1/2 teaspoon salt | 1/4 cup parmesan cheese |
| 1/4 teaspoon black pepper | Spray cooking oil |
| 1 teaspoon smoked paprika | |

JENN DANELLA

She was introduced to hunting at a young age by her father—and she still remembers their first fishing trip. She eventually started hunting on her own and with friends in high school, and soon after, hunting, fishing, and cooking became her full-time passions.

RECIPE DIRECTIONS

★ Preheat oven to 350° F

- ★ Butterfly the breast, cover with plastic wrap and pound to an even 1/4" thickness
- ★ Season with salt, black pepper, smoked paprika and garlic powder. Layer prosciutto evenly over breast meat. Place Swiss & Brie cheese down on center of breast and roll tightly. Pin roll together with toothpicks.
- ★ Prepare three shallow dishes for coating. The first will contain flour. The second will contain egg wash. The last will be for the mix of Panko and Parmesan cheese. Roll breast into each dish in order.
- ★ Place in baking dish and coat with cooking oil spray. Cook until coating is golden brown and internal temperature reaches 160° on thermometer—about 45 minutes. Larger birds may take longer.
- ★ While meat is cooking, prepare the sauce. In medium saucepan melt butter over medium-high heat. Stir in flour and whisk until it turns into a thick, golden roux. Slowly add milk, keeping sauce at a simmer. Stir in Dijon, garlic powder and Parmesan cheese. Reduce heat to low. Stir often.
- ★ Let meat rest for 10 minutes. Remove toothpicks before slicing.

★ Yields 5-7 servings

SAUCE

- 2 tablespoons of butter
- 1.5 tablespoons flour
- 2 cups milk
- 2 tablespoons Dijon mustard
- 1 teaspoon garlic powder
- 1/3 cup parmesan cheese

HEVI-18®

HEVI-18®. Ultra-dense HEVI-18 TSS Turkey provides best-in-class performance. HEVI-18 is the go-to shotshell with high density pellets and long-range lethality thanks to the extraordinary friction-reducing, sealed-in-the-shell spherical buffer. HEVI-18 is also heavy on speed and energy while putting more pellets on target. Drop three pellet sizes with HEVI-18 for the same lethality as lead. All in all, the shotshell for everyone who gets fired up to put big Tom's down. For 2023 we are excited to announce the addition of 28 gauge, 3" to the HEVI-18 lineup.

PREDATOR

SHOW EM' WHO THE NATURAL BORN KILLER IS.

SELECTING THE CALL LOCATION:

Look for coyote activity & food sources. Around cattle, hay fields, etc. Transition areas can be very productive for harvesting. Find the highest ground possible in the area. No high ground, find an area with good shooting lanes for success.

SEAN TUTTLE

DEAD COYOTE!®

DEAD COYOTE!®. Coyotes are tough to hunt. If you think you've done everything right, they'll find a way to prove you wrong. But when you get one to come into range, you want a high-density shotshell for the occasion. For a quick, clean kill go with Dead Coyote!. More downrange energy than any other predator shell. Frangible HEVI-Shot® T and 00B pellets will put more pellets on target. And it's deadly up to 70 yards. Coyotes might sing, but you'll be making the hits.
