

NEW FOR 2018

NITRO™ LASER RANGE FINDERS

Experienced hunters and shooters know that accurate shots begin with an accurate distance to target. Bushnell® Nitro™ laser rangefinders are next level, with range extending to one mile and beyond. Forged polymer armor housing and EXO™ Barrier protective coating on the lenses ensure that Nitro™ laser rangefinders perform, rain or shine.

INDUSTRY LEADING FEATURES:

ARC™ MODE - Angle Range Compensation accounts for uphill and downhill angles when ranging, providing a true range to target

EXO™ BARRIER - Protective coating bonds to exterior lenses, repelling water, oil, dust and debris for clear viewing in the worst weather.

BRUSH™ MODE - Ignores foreground objects – brush, tree branches, etc. – and provides distances to background objects only.

CLARITY - Wide objective lenses allow for best resolution and contrast in all lighting conditions.

SCAN MODE - SCAN across the landscape while viewing a continuously updated LCD display of the distance to the target.

BULLSEYE™ MODE - Acquires the distances of small targets without inadvertently measuring background target distances
