

Bushnell®

**FULL SPECTRUM
TARGETING**

TROPHY XTREME LASER RANGEFINDER

MARKET RELEASE DATE:

February 15, 2016

Whether you hunt from a blind or tree stand, you rarely shoot on a level plane. The difference is enough to affect your arrow. Bushnell's new Trophy XTreme Laser Rangefinder with ARC Technology takes away the guesswork. ARC (Angle Range Compensation) accounts for the angle when calculating the distance, letting you know precisely where to shoot. Plus, Full Spectrum Targeting means the XTreme Laser Rangefinder will acquire dark, non-reflective targets.

FEATURES & BENEFITS

- » ARC (Angle Range Compensation) technology
- » Full Spectrum Targeting technology
- » Range from 7-850 yards
- » 1-yard accuracy
- » Rainproof
